

Litezupp LAUX-TR6 GMP v2

TR6 boot rain gutter mount 3rd brake light

The Auxiliary light can be connected as an additional brake light and is designed to fit in the rain gutter of the Triumph TR6 trunk. The light housing is ABS plastic with red lens, 8 LED strip with CREE LEDs, double back sticky pads for mounting and approximately 5 ft of two conductor wire. Version 2 shortens the width of the Light for better manufacturability and uses higher output LEDs for brighter lighting.

Specifications:

- LED PCB: Eight high performance red CREE LEDs
- Case material: Translucent diffuser lens, black ABS back, case angle upward tilt to clear boot (trunk) lid opening.
- Dimensions Length: 4.73", Width base: 1.1"
- Mounting: Rain channel, double sticky tape
- Power: 12V 200 ma (approx. 2.4 watts), no polarity
- Wire length: approx. 5 ft.
- Wire routing: Front bottom channel.
- This unit is not sealed but has waterproofing applied

Note: Slight adjustment of Boot (trunk) lid may be required for proper lid opening.

Considerations and other mounting options:

With its low profile, a luggage rack may obstruct the light. Other mounting options may be possible as the wiring exits the center of the unit so the base may be attached to other surfaces.

With luggage rack – visibility of light may be limited.
